

# Statement

ST. LOUIS, Sept. 18, 2017 – *We question the conclusions of the study around this complex issue and have long advocated technology as the proper approach for addressing society’s interest in managing greenhouse gas emissions. Greater use of technology can help meet the world’s need for energy security, economic growth and environmental solutions through high-efficiency low emissions coal-fueled power plants today and research and development funding for carbon capture over time. Our position [statement on energy and climate](#) can be found on [PeabodyEnergy.com](#) and in our Corporate and Social Responsibility Report.*
